

M9P · Independent temporal confirmation

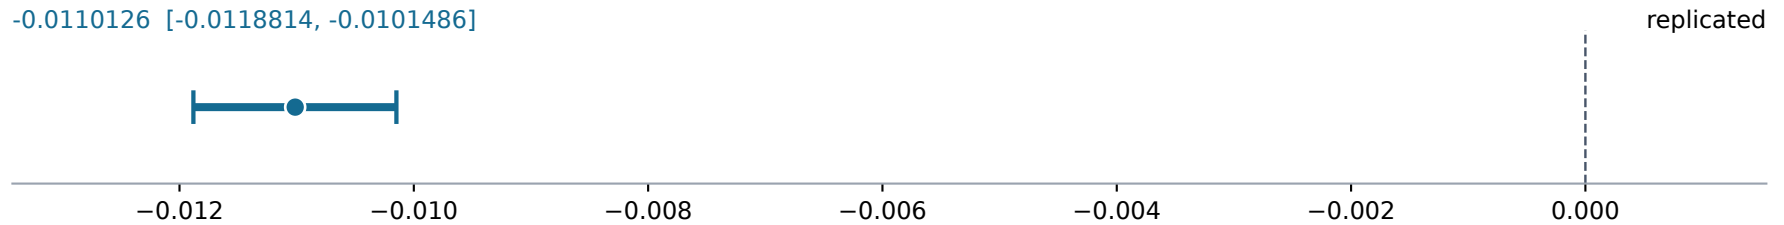

120 campaigns · 4 strata × 30 · 10,000 paired campaign bootstrap draws

98.333% percentile intervals; Bonferroni allocation of nominal family $\alpha = 0.05$

A Conditional information

Temporal minus state-only Brier score; observed test health is used

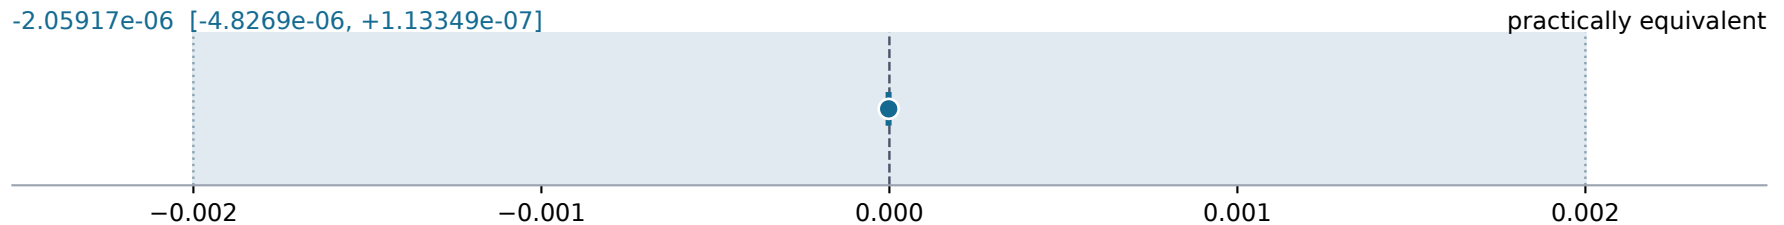

-0.0110126 [-0.0118814, -0.0101486]

B Increment in the mean forecast

Temporal minus state-only Brier score; forecast uses learner data only

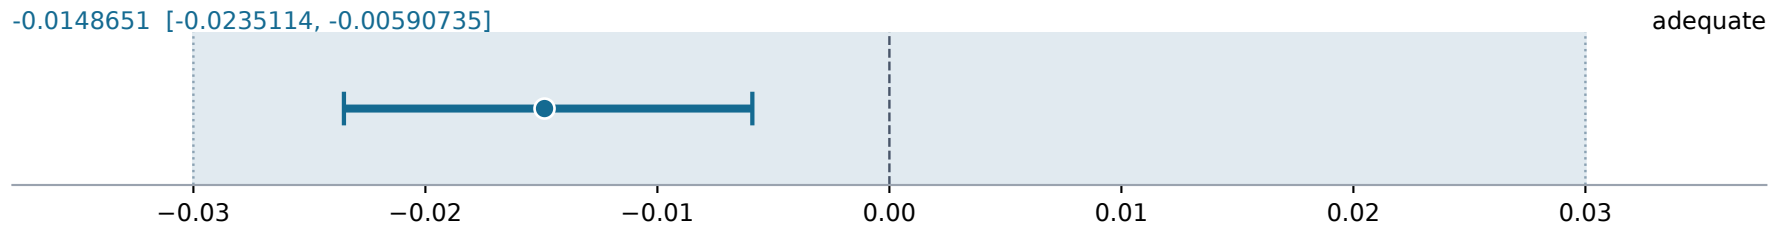

-2.05917e-06 [-4.8269e-06, +1.13349e-07]

C Mean forecast calibration

Temporal forecast minus observed held-out success fraction

-0.0148651 [-0.0235114, -0.00590735]

Shading: registered marginal equivalence (± 0.002) and mean calibration (± 0.03) regions.

Separate x-axis scales. Panel A is a conditional diagnostic; it does not establish advance-forecast gain.
